

COMP 4332 / RMBI 4310

Big Data Mining (Spring 2022)

Project 2 Social Network Mining

TA: Haoran Li(hlibt@connect.ust.hk)

Social Network

Network Representations

Input

Output

Link Prediction

- Predict the relation between nodes with their similarity and calculate the AUC-ROC score.

Pipeline

- Data loader
- Random walk generator (first-order, second-order, ...)
- Embedding algorithm (DeepWalk, node2vec, ...)
- Scorer

Dataset

- training data: 8343 nodes, 100000 edges
- validation data: 5457 nodes, 19267 edges
- test data: 5425 nodes, 40000 edges (19268 positive edges)
- score: [0, 1]
- given features: `user_id`, `friends`

user_id	friends

...

Analysis

- Heatmap (<https://stackoverflow.com/questions/33282368/plotting-a-2d-heatmap-with-matplotlib>)

Evaluation

- AUC-ROC score on **test data**

Submission

- Predictions on **test data** (please make sure your pred.csv's format is same as test.csv: src/dst/score)
- Report (1~2 pages)
- Code (Frameworks and even programming languages are not restricted.)
- DDL: May 10, 2022
- Submission: Each **team leader** is required to submit the groupNo.zip file that contains pred.csv, the report, and your team's code on canvas.
- we will check your report with your code and the accuracy.

Grading Rule

Grade	Model (80%)	Report (20%)	Baseline
60%		submission	
80%	an easy baseline that most students can outperform	detailed explanation	40000 edges (20732 negative): 91.00%
90%	a competitive baseline that about half students can surpass	detailed explanation and analysis	40000 edges (20732 negative): 92.30%
100%	a very competitive baseline	excellent visualization and analysis	40000 edges (20732 negative): 92.90%

Thank You
